PROFESSIONAL EXPERIENCE

Full-stack developer-Tutoring Platform Web Application Freelance December 2025 - January 2026	Laravel, Vue.js, GitHub, Postman, MySQL, Pinia.js, Shadcn
- Built and deployed a full-stack tutoring platform connecting students with tutors, featuring real-time feedback, file uploads, and tutor rating systems using Laravel and Vue.js. - Engineered RESTful API endpoints following Laravel best practices with Controller → Request → Service architecture, implementing feedback reporting system for student reviews and tutor ratings. - Implemented polymorphic relationships in Laravel for flexible file upload management across multiple models. - Architected modular Vue.js component structure with reusable composables for shared logic and state management, improving code maintainability, reducing duplication, and enhancing development efficiency. - Optimized frontend performance through lazy loading techniques, reducing initial page load time. - Collaborated with designers to implement pixel-perfect UI components from Figma mockups, ensuring design consistency across the platform. - Built and maintained core booking system features including scheduling, availability management, and tutor-student session handling within an Agile team workflow.	

Full-stack developer-Non-Profit Membership Platform Freelance November 2025 - December 2025	Node.js, React, PostgreSQL (Supabase), Stripe API, TypeScript
- Delivered a full-stack membership platform for a non-profit organization enabling tiered subscriptions (Bronze, Silver, Gold) using Node.js backend and React frontend. - Integrated Stripe Payment Links to handle subscription processing, redirecting users to secure Stripe-hosted checkout pages for tier-based membership purchases. - Engineered email-based membership verification system that checks database for existing subscriptions and dynamically displays user's current tier status or available subscription options. - Built a secure admin dashboard with CRUD functionality using PostgreSQL (Supabase) for comprehensive member management, subscription tracking, and tier monitoring. - Designed responsive UI/UX with conditional rendering to dynamically display subscription options based on user's current membership tier. - Implemented Stripe webhook integration to automatically update database records upon successful payment completion.	

Full-stack developer-Inventory Management System HyperFuture February 2024 - May 2024	PHP, XAMPP, JAVASCRIPT GitHub, CSS
- Built and deployed a full-stack Inventory Management System for HyperFuture, replacing manual spreadsheet workflows and improving data accuracy across teams. - Implemented token-based authentication with role-based access (Admin, Moderator, User) and email verification (PHPMailer). - Built core CRUD functionalities with filtering and spreadsheet integration, allowing users to import and export inventory data for efficient updates and reporting. - Centralized inventory data management, improving accuracy, reducing errors, and saving time across teams.	

KEY PROJECTS

Full-stack developer CapstoneProject—EASE-PARK: a car parking management system utilizing rfid, esp32, microcontroller, and sensor integration September 2024 - November 2024	JavaScript, CSS, Arduino, ESP32, GitHub, XAMPP, PHP, RFID
- Built a full-stack car parking management system integrating RFID, ESP32 microcontrollers, and sensors with a responsive web application, improving security and efficiency in vehicle access. - Implemented session-based authentication with email verification (PHPMailer). - Built a responsive dashboard UI to display real-time parking availability, recent activity, and registered users—helping admins monitor usage at a glance. - Programmed the web-to-hardware integration to fetch real-time parking slot status from Arduino-based sensors, automatically updating the dashboard. - Built CRUD tables with search/filter features for user management and timestamp-based logging to track vehicle entries and exits. - Collaborated on dynamic parking lot visualization using CSS and conditional rendering to show real-time slot status: car icons for occupied, empty spaces for available, and warnings for faulty/unavailable sensors. - Delivered a functional prototype to the university panel, demonstrating end-to-end hardware-software integration for automated vehicle access management.	

EDUCATION

Bachelor of Science in Information Technology
Don Honorio Ventura State University (Pampanga State University) | 2021-2025

Academic Achievement: Magna Cum Laude
