PROFESSIONAL EXPERIENCE

Full-Stack Developer-Non-Profit Membership Platform Freelance November 2025 - December 2025	Node.js, React, PostgreSQL (Supabase), Stripe API, TypeScript
- Delivered a full-stack membership platform for a non-profit organization enabling tiered subscriptions (Bronze, Silver, Gold) using Node.js backend and React frontend. - Integrated Stripe Payment Links to handle subscription processing, redirecting users to secure Stripe-hosted checkout pages for tier-based membership purchases. - Engineered email-based membership verification system that checks database for existing subscriptions and dynamically displays user's current tier status or available subscription options. - Built a secure admin dashboard with CRUD functionality using PostgreSQL (Supabase) for comprehensive member management, subscription tracking, and tier monitoring. - Designed responsive UI/UX with conditional rendering to dynamically display subscription options based on user's current membership tier. - Implemented Stripe webhook integration to automatically update database records upon successful payment completion.	
Full-Stack Developer-Tutoring Platform Web Application Freelance December 2025 - January 2026	Laravel, Vue.js, GitHub, Postman, MySQL, Pinia.js, Shadcn
- Built and deployed a full-stack tutoring platform connecting students with tutors, featuring real-time feedback, file uploads, and tutor rating systems using Laravel and Vue.js. - Engineered RESTful API endpoints following Laravel best practices with Controller → Request → Service architecture, implementing feedback reporting system for student reviews and tutor ratings. - Implemented polymorphic relationships in Laravel for flexible file upload management across multiple models. - Architected modular Vue.js component structure with reusable composables for shared logic and state management, improving code maintainability, reducing duplication, and enhancing development efficiency. - Optimized frontend performance through lazy loading techniques, reducing initial page load time. - Collaborated with designers to implement pixel-perfect UI components from Figma mockups, ensuring design consistency across the platform. - Built and maintained core booking system features including scheduling, availability management, and tutor-student session handling within an Agile team workflow.	
Full-Stack Developer-Inventory Management System HyperFuture February 2024 - May 2024	PHP, MYSQL, JAVASCRIPT GitHub, CSS
- Built and deployed a full-stack Inventory Management System for HyperFuture, replacing manual spreadsheet workflows and improving data accuracy across teams. - Implemented token-based authentication with role-based access (Admin, Moderator, User) and email verification (PHPMailer). - Built core CRUD functionalities with filtering and spreadsheet integration, allowing users to import and export inventory data for efficient updates and reporting. - Centralized inventory data management, improving accuracy, reducing errors, and saving time across teams.	

KEY PROJECTS

Full-Stack Developer CapstoneProject—EASE-PARK: a car parking management system utilizing rfid, esp32, microcontroller, and sensor integration September 2024 - November 2024	JavaScript, CSS, Arduino, ESP32, GitHub, XAMPP, PHP, RFID
- Built a full-stack car parking management system integrating RFID, ESP32 microcontrollers, and sensors with a responsive web application, improving security and efficiency in vehicle access. - Implemented session-based authentication with email verification (PHPMailer). - Built a responsive dashboard UI to display real-time parking availability, recent activity, and registered users—helping admins monitor usage at a glance. - Programmed the web-to-hardware integration to fetch real-time parking slot status from Arduino-based sensors, automatically updating the dashboard. - Built CRUD tables with search/filter features for user management and timestamp-based logging to track vehicle entries and exits. - Collaborated on dynamic parking lot visualization using CSS and conditional rendering to show real-time slot status: car icons for occupied, empty spaces for available, and warnings for faulty/unavailable sensors. - Delivered a functional prototype to the university panel, demonstrating end-to-end hardware-software integration for automated vehicle access management.	

Full-Stack Developer

ChatAI – AI-Powered Chat Web Application (Portfolio Project) | June 2025 - July 2025

Link: <https://chat-ai-uify.onrender.com/>

- Built a full-stack ChatGPT-style web application enabling users to create, save, and delete conversations, with real-time AI interaction and typing animations using Alpine.js and AJAX messaging.
- Implemented secure authentication with Google login, email verification, session handling, and guest chat mode (conversations not stored).
- Developed a responsive UI with Tailwind Typography (prose) for properly formatted AI responses, supporting clean headers, lists, and code blocks across devices.
- Integrated error handling for API token usage limits and response failures, ensuring reliable AI interaction.

Full-Stack Developer

Taskly – Task Management Web Application (Portfolio Project) | July 2025 - September 2025

Link: <https://taskly-d79v.onrender.com>

- Developed a full-stack Single Page Application (SPA) task manager enabling users to create, update, delete, and manage tasks with title, due date, priority, and description, enforcing MVC architecture for maintainable and scalable code.
- Designed and implemented interactive analytics dashboards using React state management and useEffect, including bar, pie, and donut charts, and productivity cards to provide actionable insights based on real data.
- Built responsive, mobile-friendly tables with search, filter, update, delete functionality, and pagination to efficiently manage tasks.
- Implemented lazy loading to enhance performance and reduce initial load times for heavy components and analytics data.
- Implemented authentication and authorization with Laravel Sanctum, utilizing guest and auth guards to ensure secure, user-specific access.

EDUCATION

Bachelor of Science in Information Technology
Don Honorio Ventura State University (Pampanga State University) | 2021-2025

Academic Achievement: Magna Cum Laude

Laravel, Blade, Alpine.js, JavaScript,
TailwindCSS, GitHub, DeepSeek v3
API, Google API

Laravel, React, TailwindCSS, GitHub,
Laravel Sanctum, Typescript
